What makes the SHEM different from other OHS programs? What do I get out of it?

Designed to provide existing safety practitioners with an academic qualification, SHEM is the first diploma level program offered online at this level. Students will find themselves stretched by new critical thinking skills which will bring an enriched professional perspective to their daily practice.

The SHEM diploma program produces graduates that confidently step into practitioner roles, ensuring the workforce is represented by professionals that don't just bring life experience and motivation, but real, tangible educational credentials and skills.

I've heard conflicting feedback about online education. Why should I choose UFred over a traditional in-person school?

UFred programs are created for working professionals. All mandatory virtual classes can be attended in the evening from anywhere with internet access. Not only do most of our students continue working full time with their current organization: many are able to have their tuition covered by their current employer - an arrangement that often results in advancement during study as a result of new skills.

Completion of UFred's SHEM program satisfies a significant requirement for prospective OHS professional certification, mandated by the BCRSP.

UFRED IS FOCUSED ON: **EMPOWERING PROFESSIONALS**

Many OHS workers are reaching a point in their careers where they find it difficult to communicate effectively with executive leadership. To bridge the gap between field experience and the business of OHS within organizations, professional certification may be the solution. In a discipline as scrutinized as OHS, organizations are relying on qualified health and safety professionals to expertly advise on compliance with evolving provincial and federal regulations.

The most widely recognized professional certification in Canada is the CRSP, which is governed by the Board of Canadian Registered Safety Professionals. To write the CRSP examination, OHS professionals must satisfy prerequisites, which include a minimum of 900 hours of education. UFred's CRSP Pathway, of which the SHEM diploma completes, not only satisfies this requirement, but effectively empowers OHS professionals to be heard within their industry, earning them "a seat at the table" to merge their abilities with an organization's business goals.
